

CS/DS 579 Final Project  
Presentation:

# VIRTUAL WIZARD'S CHESS

Group Members:

Sam Theuer  
Addison McGhee  
Jessie Ju  
Tyler Dolan  
Collin Lenz

# Purpose Behind Our Project

- Make chess more interesting to both players who have played before and those who have not
- Recreate a scene/game recognizable by many from *Harry Potter*
- Implement a World in Miniature controller
- Practice & refine development, modeling, and VR implementation techniques

# Description of Project and User Experience

- People will experience a sense of presence when they are placed in the mystical, magical world of *Harry Potter*
- Players will use immersive World in Miniature technology to move their pieces, plan their strategy, and defeat their opponent.
- By putting the player directly in the game and world of *Harry Potter*, we hope to increase interest and enjoyment in the classic game of chess.

# Problems We Ran Into...

- Animating body parts & modeling the original pieces
- Importing textures
- Budgeting time
- Merging Unity projects together
- Artificial Intelligence
- Unity nuances + script/event triggers

# What Worked Well...

- Modeling Chess Board and Pieces in SketchUp and Blender
- Communicating with Each Other via Slack
- Creating a Menu Screen
- Plenty of Unity forums if we got stuck

# Instructions:

- Select “Play”
- Choose which chess piece to play as
  - Note: if the piece you’re playing as gets taken, you lose
- Use the world-in-miniature chessboard to control the larger pieces
  - Click on which piece to move, then select where to move it

# Wizards Chess

*PLAY*

*CREDITS*

*QUIT*

# Choose your piece!

***KING***

***ROOK***

***BISHOP***

***KNIGHT***

***QUEEN***

***PAWN***

# General Thoughts????

We would like to thank SOHE and the department of Computer Sciences for offering this learning opportunity!
